

ADITYA SINGH

ENTERPRISE AI VALUE STRATEGY • AGENTIC ARCHITECTURE • CXO ADVISORY • BANKING & FINANCIAL SERVICES

+91 99111 26150 | singhaditya21@gmail.com | linkedin.com/in/singhaditya21 | singhaditya21.github.io/Resume | Gurugram / Delhi NCR, India

PROFESSIONAL SUMMARY

Enterprise AI strategy and transformation leader, 14+ years across banking and BFSI SaaS, combining client-facing advisory with hands-on agentic system build. Has led 39+ client programs over eight years for Punjab National Bank, Abu Dhabi Islamic Bank, HDFC Bank, Arab Bank, Kotak Mahindra Life and twelve US credit unions and community banks, spanning origination, underwriting, servicing, collections, onboarding, KYC and cards, including client-side decisioning work on customer lifetime value, churn signals, next-best-action and risk-based pricing. Founded an internal AI Center of Practice governing AI selection, risk and adoption across a 1,518+ FTE delivery organization serving 116 BFSI accounts in 50+ countries. Retains production build depth on Anthropic Claude, Llama 3, Milvus/ChromaDB, FastAPI and Playwright, and designs multi-agent hierarchies for enterprise software delivery. Leads a 63-strong span across an internal AI and platform team and concurrent client engagements. Delivery lead across a US portfolio that nearly tripled in revenue while gross margin improved sharply, and founder of the MEA and SAARC Pre-Sales Center of Excellence. MBA, IIT Roorkee (9.7/10); PMP.

IMPACT AT A GLANCE

CLIENT PORTFOLIO — EXTERNAL BANKING, INSURANCE AND CREDIT-UNION ENGAGEMENTS

\$18.9M US portfolio revenue, FY22 to FY26	2.8x revenue growth; live ARR 3.0x	22% to 71% gross margin improvement
39+ client programs across 17 institutions	63 practitioner span; team of 11, 52 on engagements	\$13.5M qualified pipeline, 24+ opportunities

PROFESSIONAL EXPERIENCE

BUSINESSNEXT — Senior Manager, Global Operations & Business Technology 2022 – Present

Noida / Gurugram, India • Enterprise CRM platform vendor to regulated BFSI. Dual mandate: external client advisory and transformation delivery for banks, insurers and credit unions, plus internal enterprise transformation of the vendor itself. Leads an 11-person team (3 formal direct reports) building the internal AI and platform estate, and 52 practitioners across concurrent client engagements; governs a ~\$420K annual technology budget.

- Client Advisory and Banking Transformation Leadership:** Advises banking, insurance and credit-union executives across US, India and MENA corridors on transformation of origination, underwriting, servicing, collections, onboarding, KYC and cards, owning discovery, target-state design, adoption and change management through go-live. Directs cross-functional teams of roughly 15 per concurrent engagement, and has led 24+ CxO-level sessions contributing \$13.5M of qualified pipeline.
- US Portfolio Commercial Performance:** Delivery lead across the US book through a period in which reported revenue grew from \$1.9M in FY22 to \$5.3M in FY26 (2.8x, 29% CAGR) on \$18.9M cumulative, live ARR tripled at a 32% CAGR, and gross margin moved from 22% to 71% as delivery cost and service margin came under control.
- Client-Side Decisioning and Analytics:** Led intelligent-decisioning work inside client programs: customer lifetime value, member banding, churn indicators, product-opportunity signals, explainability and frontline next-best-action at Magnifi Financial; risk-based policy revival decisioning at Kotak Mahindra Life; and risk ratings, eligibility and limit checks and risk-based pricing in the credit and underwriting workbench. Also built the delivery-health scoring model behind the US client portfolio dashboard, on locked pillar weights across quality, delay, risk and schedule variance.
- AI Maturity Assessment, Roadmap and Target-State Data Architecture:** Built and applied a six-dimension AI diagnostic across strategy and value, process and use cases, data, architecture and platform, Responsible AI and risk, and talent and adoption, converting findings into a prioritized use-case portfolio with investment sequencing, named owners and value KPIs. Defined target-state architecture across six platforms and governs 200+ data products on ClickHouse and PostgreSQL behind a published metric dictionary and a natural-language-to-SQL layer with typed semantic plans, bounded read-only execution and PII policy checks.
- Practice Building, Reusable IP and Client Operating-Model Change:** Founded the MEA and SAARC Pre-Sales Center of Excellence and the internal AI Center of Practice, and owns the FY26 GTM and Agentic AI pillars. Converted repeated point engagements into Symbox 3.0, a reusable transformation platform that changed how implementations are run for US credit unions, and productized three internally built platforms into customer-facing offerings now in early-access pilot with three to five BFSI institutions: Ideastorm, the Delivery Command Center and the NPS survey engine.
- Agentic Architecture and AI-Native SDLC:** Built the production retrieval platform on Llama 3 with Milvus/ChromaDB, FastAPI and ACL-aware hybrid retrieval, and the agentic delivery path on Anthropic Claude using CLI tool-use and planner-executor patterns, plus a Playwright browser agent for production CRM regression. Embedded DRE, escape rate, change-failure rate and MTTR/MTTR as engineering-productivity measures and release gates, framed by an authored three-agent reference architecture. That path shipped 22 systems in ten months as a single builder, under the same release gates applied to team-built code.
- AI Governance, Responsible AI and Regulatory Alignment:** Defined an RBAC-first AI governance architecture covering data isolation, privilege-boundary testing, hallucination controls, human-in-the-loop escalation and release-level audit evidence, mapped to RBI IT governance and SAMA CSF and aligned to EU AI Act, NIST AI RMF and ISO 42001 expectations. Built that governance into a product: Ideastorm, an agent control tower where every inference runs against budgets, policies, traces, kill switches and an audit log, backed by a consent ledger with maker-checker control and row-level security.
- Revenue-Function and Operating-Model Transformation:** Re-engineered the revenue function on a 12-module RevOps control tower spanning SDR workflow, MEDDIC qualification, ARR automation, Account 360 and revenue scorecard, with NetSuite order-to-cash reconciliation, surfacing \$3.2M of revenue opportunity under a 55,000-decision-a-year governance framework. Grew Biz-Tech from 2 people to an 11-person team, ran organizational change management across the delivery organization, and governed investment prioritization within a ~\$420K budget on baseline-to-benefit cases modeling ~\$320K of annual savings.

BUSINESSNEXT — Sr Consultant, Lead Consultant, then Manager 2016 – 2022

Noida, India • Sr Consultant 2016 (4 accounts, 60 FTEs) • Lead Consultant 2017 (12 accounts, 100 FTEs) • Manager 2019 (38 accounts, 520 FTEs).

- Scale and Delivery Governance:** Grew coverage from 4 accounts and 60 FTEs to 38 accounts and 520 FTEs across retail, corporate and Islamic banking, digital lending, collections and insurance, led the eight-program Abu Dhabi Islamic Bank engagement as Project Lead and Product Manager, and designed the delivery governance framework adopted across the portfolio.

- **Platform and Data Foundation:** Led the MSSQL to PostgreSQL migration (49 objects, zero post-migration defects), scaled the CRM to 1,300 concurrent users and 31,670 daily leads without degradation, and established the enterprise BI foundation on ClickHouse and PostgreSQL.

EARLY CAREER — Foodpanda India, C-DAC Noida and Infosys Hyderabad 2009 - 2016

- **BI Consultant, Foodpanda; Quality & Delivery Lead, C-DAC; Systems Engineer, QA and Business Analyst, Infosys:** Re-engineered order-to-cash and built 20+ dashboards for national marketplace operations across 100+ cities, cutting manual reconciliation effort 60%; led QA and business analysis across government technology product streams and US healthcare payer applications, operating as the delivery interface between offshore engineering and onshore stakeholders.

CLIENT PORTFOLIO — BANKING, INSURANCE & CREDIT UNIONS, 2018 TO 2026

Client programs across 17 institutions in the US, India and MENA, plus four product initiatives, owning discovery, functional and solution design, integration governance, release and adoption. Punjab National Bank is a contracted value; other India and MENA values are estimates benchmarked against it, totalling \$7M to \$10M. US figures are finance-reported for FY22 to FY26.

- **Punjab National Bank (India) — Five-Workstream Origination and Servicing Transformation:** Led delivery and governed solution design across lead management for credit cards, liabilities, retail assets and MSME lending, plus enterprise service request management, on one five-stage lifecycle from initiation to closure. Scope covered 14+ origination sources including mobile banking, business correspondents and co-lending partners, three credit-card journeys (assisted, self-serve with drop-off re-engagement, and pre-qualified leads enriched from Customer 360), and a branch-to-head-office hierarchy across 10,000+ branches. Delivered within the bank's Mission Parivartan program alongside Boston Consulting Group. Contract value \$1.5M.
- **HDFC Bank (India) — Six Digital Acquisition and Servicing Journeys:** Insta Fund digital account funding; Digital Token loan servicing across 11 service-request categories; Demat KYC update; GIGA group health insurance with HDFC ERGO; Commercial Cards ETB and NTB journeys; Beneficiary Owner Details self-service. Owned journey design, authentication and consent controls, and DAP integration. Estimated \$1M to \$1.5M.
- **Abu Dhabi Islamic Bank (UAE) — Eight Enterprise CRM and Wholesale Banking Programs:** Customer 360 and relationship management; the deal, credit and approval lifecycle with parallel Business, Risk, Legal, Compliance and Sharia approvals; account-opening automation; service and complaint management; Early Warning System risk-alert governance; account planning; campaign management; secure mobile CRM. Estimated \$2.5M to \$4M.
- **Arab Bank (MENA, Multi-Country) — Four Corporate Banking Programs:** Corporate Client 360 and relationship-management transformation; multi-country Corporate Sales Lifecycle across Corporate, Commercial, SME and Government segments; Target, Achievement and Account Planning; and the corporate dashboard suite covering profitability, transaction banking, global group and RRWA views. Estimated \$1.5M to \$2.5M.
- **Kotak Mahindra Life Insurance — Policy Servicing Transformation, Four Releases:** Major Revival servicing digitized across branch, contact center, non-voice and self-service channels; risk-based revival with a configurable no-form-required scheme flag spanning CRMNEXT, BRE, Online Policy Manager, LifeAsia and SRS; open-case revert visibility and acknowledgement automation. Estimated \$0.5M to \$0.8M.
- **US Credit Unions and Community Banks — Twelve Institutions:** Sound, Dupaco, WESTconsin, WESTMARK, SESLOC, Magnifi Financial, Foothill Federal, O Bee, FamilyTrust, Community Choice, Extraco Banks and FirstSource. Programs spanned Member, Account, Business, Loan and Card 360; digital onboarding and verification; case and complaint management; card servicing on Velera and VISA DPS; lending and Q2 integration; data insights and CLTV.
- **Platform and Product IP:** Led Symbox 3.0, a reusable CRM transformation platform for US credit unions, and LENDINGNEXT product strategy covering vision, personas, capability map, competitive positioning and phased roadmap, extended into credit underwriting, digital lending origination and loan fulfilment.

EDUCATION & CERTIFICATIONS

MBA — Marketing & Information Technology, IIT Roorkee | GPA 9.7 / 10.0 2013 - 2015

B.E. — Electronics & Communication Engineering, Bangalore Institute of Technology 2004 - 2009

Certifications: PMP (PMI, 2021) · PSPO II (Scrum.org, 2024) · PSM II (Scrum.org, 2020)

CAPABILITY PROFILE

Strategy & Advisory: Enterprise AI Strategy · CxO Advisory & Executive Discovery · AI Transformation Roadmaps · AI Maturity Assessments · Executive AI Business Cases · Value Realization · Business-Function Transformation · Intelligent Decisioning · GTM, Origination & Opportunity Shaping · Practice Building

Operating Model, Governance & Risk: Operating-Model & Organization Redesign · Revenue Operations & GTM Systems · MEDDICC Qualification · Change Management & Adoption · Workforce Transformation & AI Literacy · Investment Prioritization · AI Governance & Responsible AI · AI Risk & Compliance (RBI, SAMA CSF, EU AI Act, NIST AI RMF, ISO 42001)

Agentic AI, Data & Delivery Platform Depth: Agentic AI Solutioning · Agent Hierarchy & Multi-Agent Design · Planner-Executor and Tool-Use Patterns · Anthropic Claude / Claude Code · Llama 3 · RAG with ACL-Aware Hybrid Retrieval · Milvus · ChromaDB · FastAPI · Playwright · Human-in-the-Loop Design · Enterprise Data Strategy · Data Products · Governed KPI & Reporting Layer · BI Strategy · ClickHouse · PostgreSQL · Target-State SDLC · Engineering Productivity Measurement · CI/CD · Core Banking Integration (Symitar, Q2, Velera, VISA DPS)

Banking Domain: Public Sector, Wholesale & Islamic Banking (incl. Sharia governance) · Co-Lending & Business Correspondent Channels · Origination & Underwriting · Digital Lending · Servicing, Collections & Service Requests · Onboarding & KYC · Cards · Life Insurance · CLTV & Propensity Decisioning

FLAGSHIP ENGAGEMENTS

Symbox 3.0 — Reusable CRM Transformation Platform for US Credit Unions and Community Banks

- **Asset Strategy and Operating-Model Change:** Converted repeated point implementations into a productized transformation platform reused across multiple US credit unions and community banks, shifting each institution from bespoke build to templated configuration and changing how implementation teams, standards and release cycles are organized on the client side.
- **Architecture and Scope:** CRMNEXT integrated to Jack Henry Symitar/Episys through REST APIs, EDS/XSLT, middleware adapters and SFTP pipelines, covering member, branch, user and product boot-up, configuration templates, migration utilities and standard data definitions; extended into a configuration-automation and deployment factory at WESTMARK.

Abu Dhabi Islamic Bank — Enterprise CRM and Wholesale Banking Transformation, Eight Programs

- **Customer 360, Planning and Enablement:** Prospect-to-customer conversion, relationship hierarchy, contact and activity management, call reports and account-level views for wholesale, business and financial-institution banking, on RIM-based core integration with read-only handling of source-authoritative data; extended into annual account planning with manager-to-subordinate target allocation, planned-versus-actual and wallet-share views, and a secure mobile CRM for relationship managers on Citrix XenMobile.
- **Deal, Credit and Approval Lifecycle:** Designed the deal lifecycle from qualification through proposal, negotiation, mandate and closure, with parallel credit and approval processes spanning Business, Risk, Legal, Compliance and Sharia, plus account-opening automation with independent control-function approvals, rework and escalation; integrated with Algo, Phoenix and FileNet.
- **Enterprise Service and Complaint Management:** Taxonomy-driven case creation, queue-based assignment, SLA, reminder and escalation rules, customer communications and service dashboards across CTI/IVR, email and web, with specialist workflows for wholesale, business and financial-institution servicing.
- **Early Warning System and Risk-Alert Governance:** Surfaced customer-risk alerts inside Customer 360 with real-time creation, RIM association, status and risk-colour management and smart-link navigation to source, and embedded human review, justification and approval into alert handling, separating external risk calculation from CRM-based workflow governance.

HDFC Bank — Digital Acquisition and Servicing Journeys on DAP and CRMNEXT

- **Servicing Journeys:** Digital Token loan servicing digitizing 11 service-request categories including repayment schedules, statements of account, interest certificates, foreclosure and balance confirmations; Demat KYC update covering registered mobile, email, ownership relationship and income range; Beneficiary Owner Details self-service for one to six owners with supporting documents.
- **Acquisition Journeys:** Insta Fund digital account funding using secure SMS-delivered links tied to an Activity ID with 24-hour validity controls; Commercial Cards ETB and NTB application journeys with CRM lead ingestion, OTP authentication and customer classification; GIGA group health insurance integrated with HDFC ERGO, using UTM campaign attribution and OTP-authenticated eligibility.

Arab Bank — Corporate Banking Transformation, Multi-Country

- **Corporate Client 360:** Prospect creation, country-specific deduplication, client search, end-of-day processing and relationship-management views, translated from corporate-banking stakeholder requirements into functional design.
- **Corporate Sales Lifecycle:** Separate journeys for simple-product leads and for complex facility, trade and treasury deals across Corporate, Commercial, SME and Government segments, covering ETB and NTB customers in multiple countries.

Kotak Mahindra Life Insurance — Policy Servicing and Revival Transformation, Multi-Wave

- **Major Revival Transformation:** Digitized end-to-end service requests across branch, contact-center inbound and BCP, non-voice desk and self-service channels, covering customer and policy validation, revival eligibility and downstream servicing.
- **Risk-Based Revival Decisioning:** Defined a configurable no-form-required scheme flag driven by total sum at risk, paid-to date, risk commencement date and age, spanning CRMNEXT, the business rules engine, Online Policy Manager, payment journeys, LifeAsia and SSRS.

LENDINGNEXT — Product Strategy and Platform Foundation

- **Strategy:** Defined product vision, target personas, capability map, competitive positioning and a phased roadmap for a unified lending platform combining CRM, digital journeys and loan-origination capability on a common banking fabric.
- **Productization:** Carried the strategy into build across digital lending origination and onboarding (omnichannel journeys, pre-approved offers, KYC/KYB, consent, deduplication); a credit and underwriting workbench (financial spreading, cash-flow and ratio analysis, internal and external risk ratings, eligibility and limit checks, risk-based pricing, facility structuring, collateral); and loan fulfilment from sanction to disbursement with e-sign, e-stamp, collateral linking and repayment scheduling. Live across customers.

Magnifi Financial Credit Union (US) — Data Insights, CLTV and Action Hub

- **Client-Side Decisioning:** Customer lifetime value, member banding, churn indicators and product-opportunity signals from member, account, transaction and service data; owned insight-rule definition, explainability, dashboards and the Action Hub converting insight into frontline next-best-action, with staff adoption as the success measure rather than model output.

ACCOUNT EXPANSION & REPEAT MANDATES

Growth within accounts rather than one-off delivery: eight consecutive Abu Dhabi Islamic Bank programs at a single institution, each commissioned off the last; four Kotak Mahindra Life programs across three engagement waves, two currently live; four Arab Bank corporate programs commissioned inside a single year; six HDFC Bank journeys delivered in sequence; and a US credit-union portfolio grown to twelve institutions, with Symbox 3.0 productizing that repeat demand into a platform deployed across multiple institutions.

AUTHORED FRAMEWORKS, RESEARCH & THOUGHT LEADERSHIP

Three-agent reference architecture for enterprise software delivery — an authored agent-hierarchy design, not a deployed product. Three specialized agents (Build, Comply, Coordinate) operate over one lifecycle, with a defined human decision point and an evidence artifact at every stage.

Intake — Build classifies and estimates, Comply validates authorization, Coordinate scans dependencies. Build — user approves the plan, Build drafts and tests, Comply logs every action, Coordinate routes conflicts. Review — user reviews business logic, Build clears tests and lint, Comply runs reviewer checks. Deploy — user gives change-advisory approval, Build validates and deploys, Comply captures evidence, Coordinate routes incidents. Audit — user reviews the dashboard, Comply assembles the evidence pack, Coordinate reports bottlenecks.

Design intent: every stage produces output, evidence and coordination context as a byproduct of the work rather than as separate compliance effort.

- **Published Research:** "Next-Best-Action Systems in CRM", IJSR (February 2026), translating CRM decisioning practice into a structured research contribution.
- **Benchmark Research:** Authored CRM-IntegrityBench, an evaluation benchmark and Python package for CRM data-integrity and decisioning reliability, targeted at peer-reviewed publication.
- **Practitioner Writing:** Long-form LinkedIn content on enterprise AI strategy, agentic architecture, RAG design and AI governance for regulated industries, drawn from production deployments rather than commentary.
- **Portfolio and Open Work:** Architecture artifacts, RAG and agentic QA patterns, RevOps and datamart designs published at singhaditya21.github.io/Resume; the standing version of this resume is itself programmatically generated and version-controlled.

PRODUCTION AI SYSTEMS BUILT — PERSONALLY ARCHITECTED AND SHIPPED

Twenty-two systems consolidated into six platforms, architected and built end to end by one person in ten months on Anthropic Claude with CLI tool-use and planner-executor patterns, Llama 3 and self-hosted inference; three are in early-access pilot with three to five BFSI institutions. Throughout, agents propose and assist while deterministic services remain authoritative.

- **Governed Agentic Innovation and Consent Control (BFSI Early-Access Pilot):** Ideastorm carries ideas from intake and AI triage through scoring, review, POC and outcome tracking, every inference a governed run against agent and tool registries, policies, budgets, guardrails, approvals, evaluations, incidents and kill switches, with an open agent protocol, SDK and signed webhooks. Paired with a multi-tenant consent ledger providing signed evidence, notice and purpose versioning, maker-checker control, row-level security and audit trails over Kafka and RabbitMQ events.
- **Agentic Analytics and Decision Intelligence:** Planner, Retrieval, SQL and Analyst agents over semantic catalogs and schema discovery, delivering natural-language-to-SQL with typed semantic plans, bounded read-only execution, tenant and PII policy checks, evidence provenance, repair memory and approval-controlled learning, on a CRM data warehouse supplying dimensional facts, history and service metrics.
- **Enterprise RAG, Contract and Case Intelligence:** Permission-aware retrieval on Llama 3, Milvus and ChromaDB with BM25/RRF hybrid search, reranking, citations and confidence and refusal gates, moving internal retrieval accuracy from 61% to 95%; private OCR contract intelligence extracting obligations and deadlines against ~\$600K of annual exposure; and case resolution with similar-case retrieval, SLA and risk analysis and human-reviewed recommendations.
- **Multimodal Sales and Account360 Intelligence:** Agents transcribe and diarize calls, score MEDDICC and BANT, detect objections and recommend evidence-backed next actions, over BIAN-inspired canonical models unifying customer, account, KYC, consent and lending context, with survey, NPS and trusted-content services supplying feedback and engagement signals.
- **Agentic Quality Engineering and Digital Reliability:** Dynamic interface discovery generating UI, API, visual, WCAG and HAR tests with screenshot, trace and video evidence, and an LLM-guided healing loop that selects and verifies replacement locators; plus Playwright journey monitoring, n8n retry and incident workflows and AI-assisted diagnosis with deterministic fallbacks. Measured cohorts recorded 40 to 70% less manual effort and 20 to 35% fewer escaped defects.
- **Delivery, Portfolio and Financial Operations Control Tower (BFSI Early-Access Pilot):** A planner agent invoking governed tools across Azure DevOps, CRM, support, HR and finance data to generate evidence-grounded weekly status and executive narratives, over deterministic services computing project health, SLA, revenue, profitability, staffing and budgets, with NetSuite integration and PowerPoint and Excel outputs. Portfolio views span 8,186 projects and 18,570 modules under a documented LIVE, DERIVED, SUPPLEMENTARY and FALLBACK lineage model.

AI CENTER OF PRACTICE — FOUNDING LEAD

The institutional body governing how AI is selected, built, deployed and adopted across a 1,518+ FTE delivery organization in regulated BFSI, with structured use-case intake prioritized on feasibility, data availability, regulatory risk and commercial return before any build commitment.

- **Control Domains Governed:** Data isolation and tenancy, identity and RBAC boundaries, token and session lifecycle, privilege-boundary testing, prompt and output validation, hallucination and grounding controls, human-in-the-loop escalation thresholds, release-level audit evidence, and model and vendor change control.
- **Executive Briefings:** Translated deployment reality into board-ready risk, return and roadmap narratives for the executive team.

Basis of figures: program and institution counts reflect engagements led between 2018 and 2026. US portfolio revenue, ARR and margin are as reported in the US business-unit P&L for FY22 to FY26 and describe the portfolio led, not personal P&L ownership; FY27 is excluded as it remains in budget. Punjab National Bank is contracted value; other India and MENA values are estimates benchmarked per workstream against it and against reported US per-institution economics. Internal figures come from finance and operations systems of a BFSI platform vendor and represent internal scope unless stated as client scope. Pipeline is qualified and CRM-tracked, not booked. AI savings, avoidance and contract-value exposure are modeled estimates, not realized recovery. Accuracy and effort figures come from internal evaluations and measured release cohorts. Platforms named as customer-released are in early-access pilot, not general availability.
